Capturing screenshots of KEY county election results

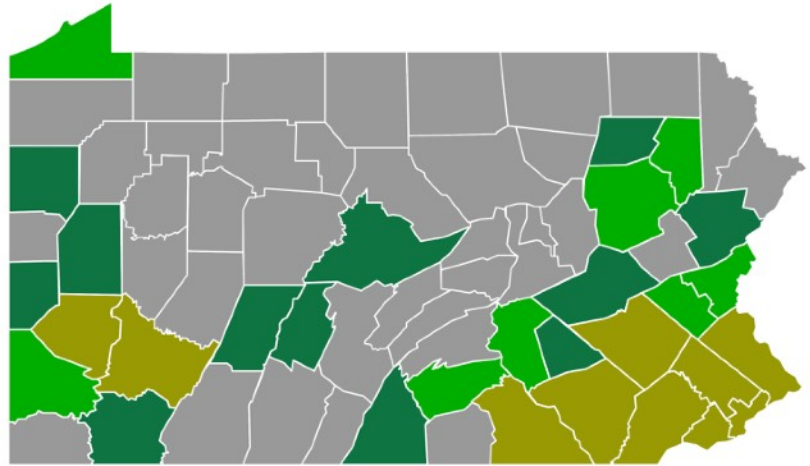

1 Monitoring US Election Night Returns

Capturing KEY states' county vote totals every 15 minutes.

Starting at close of polls, we will be documenting reported vote totals in order to preserve evidence of any anomalies, discrepancies, &/or suspicious activity.

We will be saving a time-stamped, full-page capture every 15 minutes as key counties report their vote totals on their website's results page on election night (and continuing at longer intervals daily throughout the week as further updates come in).

All we need is the correct URL for each county's live results page (often these are not available until election night). **Your job on election night** will be to quickly track down the correct URLs for your assigned counties, and place them into a spreadsheet on Google Drive.

2 Saving to Google Drive

Enter URLs into the KEY counties spreadsheet.

In some cases, the county website (&/or preliminary link to results page) URLs are already filled in on the spreadsheet to help you quickly find each results page. Once you've entered those URLs into the spreadsheet, your job is done — our automated capture program will take it from there. Thank you for helping us **WatchtheCounties!**

That's all folks.

3 Optional — Enter additional URLs

If time permits, we may want to monitor other counties in your assigned state.

If you feel up to the task, it would be helpful to enter as many URLs of other counties as you can — this will help us review the results in smaller counties and possibly spot issues there worthy of investigation.
